

INDEX OF NAMES

- Abderhalden, 14, 15, 25, 77, 90,
 91, 100, 104, 106, 154, 188.
 Abderhalden, Bloch, and Rona, 55.
 Abderhalden and Falta, 55.
 Abderhalden and Samuely, 100.
 Abderhalden and Schittenhelm,
 109, 112, 113, 129, 131.
 Ackermann and Kutscher, 127,
 128.
 Albrecht, 58.
 Alexander, 15, 175, 176, 189.
 Allihn, 184.
 Allott, E. N., 150.
 Alsberg, 118.
 Alsberg and Folin, 106, 107, 108,
 109, 111, 112, 113, 114, 115, 118,
 122, 130, 131, 132.
 Amstel, Ploos van, 52, 109, 134.
 Anderson, McCall, 28, 140, 141,
 145, 162.
 Aron, 15, 175, 185, 190, 191.
 Arzt and Hausmann, 28, 141, 144,
 148, 160, 161, 162.
 Ascoleo, 19.

 Baer, J., and Blum, L., 66.
 Bahrawy, 40.
 Bamberger, 82.
 Barker and Estes, 138.
 Bartels, 114.
 Bateson, 21, 31.
 Battelli and Stern, 35.
 Baudrimont and Malaguti, 88, 89.
 Baumann, 48, 54, 121, 122.
 Baumann and Fränkel, 47.
 Baumann and Goldmann, 94.
 Baumann and Preusse, 95.
 Baumstark, 138, 140, 151.
 Beale, 114.
 Beddard, 60.
 Beddard and Plumtre, 60.
 Bence-Jones, 4.
 Bendix, 177, 188.
 Bergmann, von, 96, 98, 118.

 Bernard, Claude, 6.
 Berzelius, 88.
 Bial, 27, 179, 181, 182, 183.
 Bial and Blumenthal, 188, 189,
 190.
 Bickel and Tasawa, 42.
 Bird, Golding, 101.
 Bittorf, 39.
 Bloch, 31, 34, 35, 38, 39, 40.
 Bloch und Rijnher, 40.
 Blum, L., 80, 81, 83, 98, 100.
 Blumenthal, 180.
 Blumenthal and Bial, 176.
 Bödeker, 44, 46, 122.
 Bödtker, 110.
 Bouchard, 4.
 Brat, 27.
 Braun, von, 186.
 Bright, Richard, 164.

 Cammidge, 122.
 Cammidge and Garrod, 123, 127,
 128.
 Cammidge and Howard, 27, 28,
 174, 175, 187, 191.
 Caporelli, 183.
 Cappelli, 141, 144, 154.
 Caracciolo, 107, 109.
 Castellani and Taylor, 184
 Castle and Allen, 23, 31.
 Church, 136.
 Civiale, 88.
 Clemens, 59.
 Cloetta, 91.
 Cohn, 26, 122.
 Colberg, 145.
 Colombini, 183.
 Conti, 109.
 Cronvall, 20, 68.
 Cuthbert, C. F., 20, 57.

 Dakin, 73, 75, 85.
 Darwin, Charles, 41.
 Darwin, Sir George, 20

- Davenport, the, 31.
 Debenedetti, 20, 57.
 Delépine, 101.
 Desmoulière, 104, 108, 122, 123, 131.
 Dewar and Gamgee, 103.
 Dombrowski, 9, 122, 124.
 Ducrey, 35.
 Durham, Florence, 34.

 Ebstein, 109, 114.
 Ebstein, Erich, and Günther, 31.
 Ebstein and Müller, 46.
 Ehrmann, 28, 141, 147, 159.
 Ellinger and Reisser, 150.
 Embden, G., 91.
 Embden, G., Salomon, and Schmidt, F., 65.
 Embden, H., 74, 75.
 Erben, 190.
 Erlenmeyer, jun., 89.

 Falta, 52, 55, 67, 68, 74, 75, 80, 81.
 Falta and Langstein, 52.
 Feer, 20.
 Fischer, Emil, 8.
 Fischer, Emil, and Zuzuki, 90, 91, 130.
 Fischer, Hans, 137, 142, 145, 147, 148, 149, 151, 154, 159, 161, 162.
 Fleischer, 46.
 Folin, 93, 94.
 Folker, 32.
 Foster, Hooper, and Whipple, 97, 98.
 Freund, 161.
 Friedländer, 82.
 Friedmann, 89, 95, 96.
 Fromherz, 23, 25, 68, 70, 73.
 Fromherz and Hermanns, 38, 73, 75, 85, 86.
 Gabriel, 90.
 Gagey, 140.
 Garcia, 121, 128.
 Garnier and Voirin, 75.
 Garrod and Hurtley, 48.
 Gaskell, J., 90, 106.
 Geyger, 78.
 Gibson and Howard, 68.
 Goldmann, 98.
 Goldmann and Baumann, 89.

 Gortner, 35.
 Graefner, 59.
 Gross, 18, 56, 66, 165, 169.
 Gross and Allard, 59, 70.
 Grund, 188.
 Grutterink and Hijmans van den Bergh, 20, 76, 79.
 Guggenheim, 36.
 Günther, Hans, 28, 137, 138, 139, 140, 142, 143, 145, 146, 147, 148, 152, 153, 154, 156, 160.

 Halliburton, Brodie, and Pickering, 41.
 Hammarsten, 20, 137, 138, 173, 188.
 Harley, Vaughan, 165.
 Harston and Soltau, 59.
 Hausmann, 157, 159, 161.
 Hegler, Fraenkel, and Schumm, 142, 143, 145, 150.
 Hele, 68, 109, 112, 113, 114, 115, 122, 124, 126, 127, 130.
 Henze, 61, 63.
 Herold, Gustav, 39.
 Heudorfer, 39.
 Hirsch, Carl, 78.
 Hopkins, Prof. F. G., 53, 54, 94.
 Hoppe-Seyler, 136.
 Howell, 160, 161.
 Hunter, William, 122.
 Huppert, 2, 47, 49, 50.
 Hurtley and Garrod, 28, 122, 123, 126, 130, 166, 168.

 Jaffe, 95.
 Jaksch, von, 174.
 Janeway, 27.
 Jankte, 63.

 Kapfhammer, 96.
 Katsch, 25, 68, 72.
 Katz, 168.
 Keyzer, 155.
 Kiliani, 172.
 Kirk, 20, 46, 49, 50.
 Kleinschmidt, 14.
 Klemperer and Jacoby, 109, 113, 119.
 af Klercker, 27, 175, 178, 179, 184, 185, 186, 187, 190, 192.
 Knapp, 184.

- Knoop, 76
 Kobert, 33.
 Kolaczek, 20, 60.
 Kraft, 182.
 Kreibich, 37.
 Kretschmer, 26.
 Kulz, 91.
 Kulz and Vogel, 176.
 Kunkel, 99.
 Kunzmann, 164.

 Landois, 59.
 Lang, 133, 134.
 Langmead, 144.
 Langstein, 75.
 Langstein and E Meyer, 51, 52,
 55, 67, 68, 70, 80.
 Lassaigne, 18.
 Leo, 107, 109, 112.
 Levene, 188.
 Levene and La Forge, 186.
 Lewis and Simon, 102, 110.
 Likhatscheff, 73.
 Link, 18.
 Linsler, 141, 162.
 Loebisch, 109.
 Loewy and Neuberg, 102, 103, 105,
 108, 109, 110, 115, 116, 121,
 122, 126, 130, 132, 134, 135.
 Löffler, 150.
 Lusitanus, Zacutus, 45.
 Luzzatto, 180, 185, 187, 190.

 Mackey, L., 14.
 Mackey and Garrod, 28, 139, 143,
 144, 146, 147, 150.
 Manby, 14.
 Mansfeldt, 11.
 Marcet, Alexander, 44, 193.
 Marriott and Wolf, 95, 109, 122,
 132.
 Marshall, 46.
 Mayer, Paul, 183.
 McMunn, 137, 159.
 Meckel, 11.
 Meirowski, 40.
 Mester, 95, 106, 107, 108, 109,
 112.
 Meyer, Erich, 20, 48, 74, 82.
 Meyer-Betz, 158, 161.
 Miller and Perkins, 28, 166, 168.
 Mittelbach, 53, 55, 71, 72, 80.

 Moller, Magnus, 161.
 Moreigne, 109, 113, 126, 129.
 Mörner, C. T., 57, 58.
 Mörner, K. A. H., 91, 92.
 Mudge, G. R., 40, 41.
 Müller, Achilles, 104.

 Nebelthau, 140, 146.
 Nencki, 149, 150.
 Nencki and Sieber, 136.
 Nencki and Zalewski, 148.
 Neubauer and Falta, 73, 79, 83,
 84.
 Neubauer, Otto, 54, 80, 81, 85, 86,
 137.
 Neubauer, Otto, and Flatow, 47,
 50.
 Neuberg, 184, 185, 186, 187, 189,
 190, 191.
 Neuberg, Carl, and Meyer, P.,
 90, 91.
 Neuberg, Carl, and Wohlgemuth,
 185.
 Neusser, 138.
 Niemann, 109, 183.
 Nocchioli and Domenici, 25.

 Ogden, 20.
 Onslow, 35.
 Orsi, 22.
 Orton and Garrod, 48.
 Osborne, 47.
 Osler, 22, 59, 63.

 Pavy, 20.
 Pearson, Karl, 16, 19, 21.
 Pearson, Nettleship, and Usher,
 18, 31, 33.
 Percival, 109, 113, 129, 131.
 Perutz, 156, 162.
 Pfeiffer, 26, 122.
 Piccini and Conti, 109, 129.
 Pick, 59.
 Pickering, 41.
 Pincussohn, 62.
 Pope, 59.
 Poulsen, 20, 60, 62.
 Primavera, 17.
 Prout, 88, 89.
 Przibram, 2.
 Punnett, 21, 27.

- Raab, 157.
 Radaeli, 162.
 Ravold and Wheeler, 68.
 Reid, 59.
 Richardson, B. W., 31.
 Riegler, 122.
 Riva and Zoja, 137, 155.
 Rodelius and Schumm, 160.
 Roos, 122, 127.
 Rosenfeld, 178, 180.
 Rothera, 90, 97, 100.

 Sallet, 137, 146, 162.
 Salkowski, 98, 99, 137, 138.
 Salkowski and Jastrowitz, 172,
 174, 177.
 Salomon, H., 164, 170.
 Sato, 40.
 Scheltema, 13.
 Schenck, 45.
 Schenk, 145.
 Scherer, 91.
 Schmey, 143.
 Schmidt, C., von Adelong, and
 Watson, 99.
 Schmidt and Allen, 99.
 Schochet, 57.
 Schölberg, 122, 192.
 Schölberg and Garrod, 123.
 Schreiber and Schneider, 39.
 Schüler, 178, 191.
 Schultz, 140, 143, 147.
 Schumm, Otto, 68, 74, 143, 145,
 149, 150, 162.
 Schunck and Marchlewski, 136.
 Scribonius, G. A., 45.
 Siegfried, Prof., 78.
 Simon, C. E., 17, 122, 126, 130.
 Simon and Campbell, 118.
 Smillie, 119.
 Smith, W., 46, 192.
 Snapper, 152, 153, 160.
 Sobernheim, 142.
 Söderbergh, 25, 56, 57, 63, 64.
 Spriggs and Leigh, 169, 170.
 Stadthagen, 109.
 Stadthagen and Brieger, 121.
 Steir, 61.
 Stokvis, 137, 138, 152.
 Stokvis, Neubauer, Otto, and
 Perutz, 156.

 Strasser, 77.
 Stromeyer, 88.
 Suner, 155, 156.

 Tappeiner, 143, 156.
 Thaulow, 89.
 Thiele, 108, 109, 111, 113, 115,
 116, 122, 128, 130.
 Thierfelder, 190.
 Thompson, Henry, 14.
 Thomson, 32.
 Thorndike, 103.
 Thursfield, 144.
 Tintemann, 190.
 Toenniessen, 24.
 Tulpus, 164.

 Udranszky and Baumann, 121,
 123, 127.
 Ultzmann, 14.
 Umber, 105.
 Umber and Bürger, 23, 24, 61, 63,
 70, 71, 74.

 Virchow, 58.
 Voit, 177, 179.
 Vollmer, 140, 141.

 Wagner, A., 59.
 Walker, T. J., 170.
 Wallis, Mackenzie, and Garrod,
 103, 110.
 Wheeler and Tollens, 172.
 Whipple, 165.
 Williams and Wolf, 108, 109, 112,
 113, 114, 115.
 Winternitz, 13.
 Wohlgemuth, 97.
 Wolf and Shaffer, 109, 111, 113,
 116, 117, 131, 132.
 Wolkow and Baumann, 46, 47, 51,
 52, 55, 74.
 Wollaston, 88, 102.

 Zeller, Thomas, and Straczewski,
 95.
 Zerner and Waldtuch, 184, 186,
 187.
 Zimnicki, 78.
 Zipmer, 70.
 Zlataroff, 177.

INDEX OF SUBJECTS

- Abnormalities, chemical, 10.
—, inborn and congenital, 11.
- Acetone, excretion of, in alcapton-uric child, 72.
—, formation of, from protein fractions by perfusion through liver, 65, 66.
- Acetone-bodies, rôle of, in diabetes, 66.
- Acetone-yielding substances on perfusion through liver, 66, 74.
- Acidosis, protective mechanism against, 3.
- Adrenalin, chemistry of, 37.
—, relation of, to dioxy-phenylalanin, 37.
- Albinism, 30-42.
—, absence of melanin pigments in, 30.
— among birds, 30.
—, an abnormality of defect, 30.
—, a congenital and persistent error, 13.
— and intravascular clotting from injection of nucleo-proteins, 41.
— as a malformation by arrest, 10, 11.
— as a Mendelian regressive character, 23, 25.
—, consanguinity of parents in relation to, 19.
—, defect of enzyme in, question of, 34.
—, effect of, on vision, 16.
—, effects of, 16.
—, expectation of life in, 31.
—, heredity of, 19.
—, incomplete, 32.
—, in rabbits, injections of melanin in, 33.
—, light in relation to physiological processes in, 41.
—, main features of, 31.
—, partial, 32.
- Albinism, persistence of, 32.
—, physiological causes of pigmentation inoperative in, 31.
—, production of by selective breeding, 13.
—, rarity of, in man, 13, 17.
—, recent advances in the study of, 30, 31.
—, seasonal, in arctic mammals and birds, 33.
—, sex-incidence of, 18.
—, theories of, 33.
—, urinary pigments in, 30.
- Albino animals, effect of strong light on red blood cells of, 42.
—, experiments on hair and skin of, 40.
— rabbit, chromogen absent from eye of, 39.
- Albinos, acquired pigmentation in, 32.
—, alleged lowered resistance of, 41.
— and normal individuals, differences between, 41.
—, cause of absence of pigment in, 38.
—, effect of exposure to sun in, 31.
—, expectation of life of, 16.
—, pigmented, 13.
—, pigmented cells in eyes of, 33.
—, red hair in, 32.
- Albumin: *see* Protein.
- Albumoses in urine, source of, 10.
- Alcapton acid, likely sources of, 51.
—, *and see* Homogentisic acid.
—, urine, staining power of, 13, 43.
- Alcaptonchrome, 58.
- Alcaptonuria, 13, 43-57.
—, alleged harmlessness of, 13, 15.
—, ammonia excretion in, 74.

- Alcaptonuria and cystinuria, case of combination of, 52, 134.
- , anomalous case of, 52, 134, 135.
- , arthritic lesions in, 15, 43, 62-64.
- , auricular wax, characters of, in, 61.
- , clinical signs of, 43.
- combined with cystinuria, case of, 52, 134, 135.
- , congenital occurrence of, 13, 46.
- , consanguinity of parents in relation to, 19, 20, 21.
- considered as a Mendelian regressive character, 21, 22, 24, 25.
- contrasted with cystinuria, 133.
- , darkening of cartilage in, 43, 58, 59, 60, 61.
- , —, age-incidence of, 60.
- , diet, effects of, in, 51, 55, 67.
- , early recorded cases of, 44, 45.
- , effect of administration to alcaptonurics of:
- benzoyl-phenylalanin, 80.
- 2:4 dioxy-benzoic acid, 84.
- gentisic acid, 84.
- glycyl-l-tyrosin, subcutaneously, 55.
- halogen-proteins, 81.
- halogen-tyrosins, 81.
- homogentisic acid, 75.
- hydroquinone-pyruvic acid, 83.
- metatyrosin, 81.
- milk diet, 70.
- orthotyrosin, 81.
- paroxy-phenyl-acetic acid, 81.
- paroxy-phenyl- α -lactic acid, 80.
- paroxy-phenyl-pyruvic acid, 81, 86.
- phenyl-acetic acid, 79.
- phenylalanin, 52.
- phenyl-glyceric acid, 79.
- phenyl- α -lactic acid, 76, 79.
- phenyl- β -lactic acid, 79.
- phenyl-propionic acid, 79.
- phenyl-pyruvic acid, 79.
- plasmon, 70.
- protein foods, 52, 55.
- protocatechuic acid, 84.
- tryptophane, 53.
- tyrosin, 51.
- Alcaptonuria, effect of fasting in, on homogentisic acid output, 71, 72.
- , effect of milk diet in, 70.
- , experimental, 74.
- , failure to destroy homogentisic acid in, 75.
- , family incidence of, 19-25, 45.
- , heredity of, 19, 22.
- , history of our knowledge of, 44, 45.
- , homogentisic acid in blood in, 56.
- , — —, urine in, 48, 67.
- , homogentisic acid to nitrogen ratio in, 67.
- , incapacity of dealing with phenylalanin in, 66, 67.
- , incapacity of dealing with tyrosin in, 66, 67.
- , infective theory of, 55.
- , intermittent, 14, 77, 78.
- , —, cases of, 78.
- , intestinal disinfection in, 55.
- , Mendel's law in relation to, 21.
- , osteo-arthritic lesions in, 15, 43, 62-4.
- , persistence of, 46.
- , positive Wassermann reaction in, 56.
- , proportion of alcaptonuric members in families, 23.
- , question of completeness of chemical error in, 67.
- , rarity of, 17, 45.
- , sex-incidence of, 18.
- , temporary, 14, 46, 77, 78.
- , —, cases of, 78.
- , theory of, 65-87.
- , tissue proteins in, 55.
- , transitory, artificial, 74.
- , treatment of, potassium iodide in, 57.
- , tyrosin in hair in, 56.
- , tyrosin in nails in, 56.
- , uric acid excretion in, 51.
- , urine in, 43, 51, 58.
- , —, colour of, 43.
- , —, darkening of on exposure, 43, 53.
- , —, homogentisic acid in, 46.
- , —, properties of, 43, 44.

- Alcaptonuria, urine in, reducing power of, 44.
 —, —, uroleucic acid, supposed excretion of, in, 48
 —, *and see* Ochronosis.
 Alcaptonuric, difference between, and normal man in metabolism, 83.
 — infants, urine of, red colour of, on standing, 43, 58.
 — serum devoid of homogentisic acid-destroying ferment, 66.
 Alimentary canal, breaking down of proteins in, 132.
 — —, excretory products derived from, 7.
 — —, formation of indol in, 8.
 — —, formation of urobilin in, 8.
 — —, products of bacterial action in, 8.
 Alkalies, the use of, in the treatment of cystinuria, 119.
 'Alkapton' of Bödeker, 44, 46.
 Amino-acids, desamination of, 133.
 —, end-products of, 2.
 —, groupings of, 2; *and see* individual Amino-acids.
 Ammonia, excretion of, in alcaptonuria, 74.
 —, —, in diabetes, 74.
 —, used for neutralization of abnormal acid, 3.
 Arabinose, a pentose sugar, 172.
 —, characters of, 172.
 —, effect of administration of, to normal man, 174.
 dl-arabinose in urine of pentosurics, 187.
 —, output, proteins in diet in relation to, 191, 192.
 l-arabinose, derivation of from d-galactose, 189.
 Arabinose, lævo-, dextrorotatory property of, 173.
 —, —, effect of administration of, to a pentosuric, 189.
 —, —, formula of, 173.
 —, —, in pentose urine, 180.
 —, —, in urine in alimentary pentosuria, 174.
 —, racemic, effect of administration of, to normal man, 185.
 Arabinose, racemic, in pentosuric urine, 185, 187.
 —, —, parent substance of, 189.
 Arabinoses, formulæ of, 173; *see also* Pentose *and* Pentosuria.
 Arginin, effect of administration of, to cystinurics, 126.
 —, putrescin derived from, 104, 125.
 Aromatic acids, effect of administration of, to alcaptonurics, 79.
 — —, fate of, in normal organism, 66.
 — —, formulæ and constitution of, 79.
 — — compounds in blood as cause of ochronosis, 62.
 — fractions of proteins in relation to homogentisic acid excretion, 52.
 — — —, normal metabolism of, 65, 66.
 — substances, paths for catabolism of, 86.
 — sulphates in relation to bacterial decomposition, 93.
 — — in urine, 3, 7, 65, 93.
 — to simple sulphates in urine, ratio of, index to bacterial decomposition, 93.
 Aspartic acid, effect of administration of, to cystinurics, 105, 130, 131.
 Aural cartilages, stiffening of, in ochronosis, 60, 63.
 Autolysis of tissues, products of, in urine, 10.
 Bacterial action in intestine in relation to sulphate excretion, 93, 94.
 — —, in relation to diamines in fæces, 127.
 — decomposition estimated by ratio of aromatic to simple sulphates in urine, 93.
 — products, excretion of, in urine, 8, 93, 94.
 — theory of alcaptonuria, 55.
 — — of cystinuria, 125, 126.
 'Bearded woman', case of a, 142, 143.

- Bence-Jones protein in urine, 3, 7.
 Benzene ring, failure to break up, in alcaptonuria, 84.
 —, fate of, in normal organism, 3, 65, 74, 83, 84, 85.
 —, importance of structure of, 81, 82.
 —, synthesis of, unknown in animals, 51.
 Benzoyl-phenylalanin, inactive when administered to alcaptonurics, 80.
 Benzoylation of urine, alcapton acid obtained by, 48.
 Bial's test for pentose in urine, 181.
 Bile, examination of, in case of cystinuria, 117, 132.
 —, porphyrin pigments in, 136, 137, 153.
 Bile-acids, cystin and cholalic acid in relation to, 96, 97, 98.
 —, metabolism of, 98.
 —, specific differences in, 1.
 Bile-duct, effect of blocking of, on urinary excretion, 8.
 Biliary fistula, case of cystinuria with, 117.
 —, effect of administration of cystin to dogs with, 96.
 —, effect of, upon neutral sulphur of urine, 99.
 — obstruction in relation to butter-stools, 164, 165.
 Bilirubin as a possible parent substance of porphyrin, 153.
 —, broken up by intestinal bacteria, 8.
 —, daily output of, 154, 155.
 —, formula of, 153.
 Blood corpuscles, red, effect of bright light on, 42.
 —, cystin in, 104.
 — of alcaptonuric, homogentisic acid in, 56.
 — of alcaptonurics, Wassermann reactions of, 56, 57.
 — picture in hæmatoporphyria congenita, 147.
 —, proteins of, in alcaptonuria, 56.
 — serum, porphyrin in, 145.
 Blood sugar in a pentosuric, normal, 176.
 —, transfusion-types of, as evidences of chemical diversity, 3.
 Bone, pigmentation of, in hæmatoporphyria congenita, 143.
 —, —, —, method of detecting, 143, 144.
 Bones, uroporphyrin in, 150.
 Brombenzene, effect of administration of, to dog, 95.
 'Butter-stools', 164.
 — as indication of deficient pancreatic secretion, 171.
 —, conditions determining formation of, 165.
 —, influence of diet upon, 165, 167.
 Cadaverin, derivation of, from lysin, 125.
 —, formula of, 124.
 — in cystinuric urine, 102, 104, 105, 121, 122, 123, 124.
 — in fæces in dysentery, 122.
 — in normal urine, 9, 122.
 — in urine in pernicious anæmia, 122.
See also Diamines.
 Calcium deficiency in ochronotic skeleton, 64.
 Calculi, cystin, 14, 15, 26, 88.
 —, —, composition of, 90, 91.
 —, —, in dogs, 18.
 —, —, tyrosin in, 130.
 —, —, urinary infection in relation to, 120.
 —, xanthin, 192, 193.
 Calculus formation, urinary infection in relation to, 119, 120.
 Carbohydrate diet, effect of, on pentose output, 189.
 Carbolic acid dressings as cause of ochronosis, 59.
 Carbolic ochronosis, 59.
 —, —, osteo-arthritis in relation to, 63.
 Carboluria, sulphate excretion in, 93.
 Cartilage, blackening of, experimental, 62.
 —, —, in alcaptonurics, 43, 58, 59, 60, 61.

- Cartilage, blackening of, in alcaptonurics, age-incidence of, 60.
 —, —, in carbolic acid absorption, 59, 60.
- Casein, effect of, on homogentisic acid output, 67.
- Cerebrin, galactose the sugar yielded by, 190.
- Chemical abnormalities, structural abnormalities in relation to, 12.
 — specificity and individuality, 2, 3.
- Chloral, effect of, on excretion of sulphates in urine, 94.
- Chloroform, effect of, on excretion of sulphates in urine, 94.
- Chlorophyll as a source of porphyrins, 136, 152.
- Cholalic acid and taurocholic acid formation, 96, 118.
 — — the determining factor in taurocholic acid output, 97.
 — —, effect of administration of, to cystinurics, 118.
 — —, —, to man, 97.
 — —, —, with cystin, 97.
 — — in faeces of case of steatorrhœa, 167.
- Chromidrosis, in ochronosis, 61.
- Chromogen absent from eye of albino rabbit, 39.
 —, the colourless precursor of melanin, 39.
 — in tissues, experiments to establish existence of, 40.
 — —, in relation to porphyrin and photosensitivity, 162.
- Clotting, intravascular, from injection of nucleo-proteins, 41.
- Conjunctiva, staining of, in alcaptonuria, 43.
- Consanguineous marriages, frequency of, 20, 21.
- Consanguinity of parents of albinos, 19.
 — — of alcaptonurics, 19, 20, 21.
 — — of cystinurics, 26.
 — — and hæmatoporphyrinuria, 28.
 — — and Mendelian recessive characters, 22.
 — — and steatorrhœa congenita, 28.
- Cystic acid an intermediate stage between cystin and taurin, 96.
- Cystein an intermediate product of protein metabolism, 95.
 —, effect of subcutaneous injection of, in cystinurics, 116, 117.
 —, relation of, to cystin, 89.
 —, rôle of, in formation of mercapturic acid, 95.
- Cystin, absent from faeces, in cystinurics, 103, 125.
 — an amino-acid, 92.
 — an intermediate product of sulphur metabolism, 91.
 — a primary protein fraction, 5, 92, 95.
 — as product of pancreatic digestion, 91.
 — a sulphur compound, 88, 89, 92.
 —, analysis of, 88.
 —, calculi of, 14, 15, 26, 88, 90, 91, 100.
 —, calculi of, rôle of urinary infection in their production, 121.
 — calculi, tyrosin in, 130.
 —, constitution of, 89, 92, 96.
 —, crystalline form of, 88, 101, 102.
 — crystals in urine, 88, 111.
 —, deposition of, in tissues in cystinuria, 91, 100, 101.
 —, discovery of, 88.
 —, effect of administration of, to animals, 99, 100.
 —, —, to dogs on taurocholic acid, 96.
 —, —, to man, 99, 114.
 —, —, to rabbits, 97.
 —, —, with cholalic acid, to dogs, 96, 97.
 —, effect of protein in diet on excretion of, 110-14.
 —, effect of subcutaneous injection of, in cystinurics, 116, 117.
 —, estimation of, in urine, 106.
 —, excretion of, in acute yellow atrophy of liver, 105.
 —, —, in cystinuria, table of daily, 109.
 —, formula of, 89.
 — in animal tissues, 91, 100, 101.
 — in blood of cystinurics, 104.

- Cystin in kidney of an ox, 91.
 — in liver of man, 91.
 — in sweat of cystinurics, 103.
 — in urine, methods of estimation of, 106, 107, 108, 110.
 —, isomeric form of, 90.
 —, metabolism of, 95, 96, 100.
 — obtained by hydrolysis of hair, 91, 115.
 — obtained by hydrolysis of serum and egg-albumins, 91.
 — obtained from calculus, effect of administration of, to cystinurics, 115, 116.
 — obtained from hair, effect of administration of, to cystinurics, 115, 116.
 — of proteins, catabolism of, 92.
 —, relation of, to taurin, 96, 98, 100.
 —, solubility of, in ammonia, 102.
 —, synthesis of, 89.
 — to nitrogen ratio in bile of cystinurics, 117.
 — to nitrogen ratio in cystinuria, importance of, 113, 114.
 — to nitrogen ratio in cystinuria, table showing variations of, 113.
 —, Wollaston's test for, 102.
 Cystinuria, 14, 89-120.
 —, age-incidence of, 14.
 — an arrest rather than perversion of metabolism, 135.
 — and alcaptonuria, case of combination of, 134.
 — and diaminuria, 121-35.
 —, bile in a case of biliary fistula with, 117.
 —, calculus formation in, 88, 90, 100, 117.
 — combined with alcaptonuria, case of, 52, 134.
 —, congenital occurrence of, question of, 14.
 — contrasted with alcaptonuria, 133.
 —, crystalline deposits in urine in, 88, 101, 111.
 —, cystin not the only protein fraction implicated in, 104.
 —, C : N ratio in, 112, 113.
 Cystinuria, daily excretion of cystin in, table of, 109, 112.
 —, day and night excretion of cystin in, 114.
 —, derangement of sulphur metabolism in, 100, 107.
 —, diamines in faeces in, 103, 121, 127.
 —, — urine in, 104, 121.
 —, direct transmission of, 25.
 —, effect of administration to cystinurics of :
 arginin, 126.
 aspartic acid, 105, 130, 131.
 cholalic acid, 118.
 cystein, 116, 117.
 cystin, 114, 116.
 lysine, 126.
 polypeptides, 133.
 tyrosin, 130.
 —, effect of protein in diet on cystin excretion in, 110-14.
 —, essential error in, 135.
 —, excretion of diamines in, 103, 104, 121, 127.
 —, excretion of neutral sulphur in, 107, 108, 111.
 —, excretion of sulphates in, 107, 108, 110, 111.
 —, excretion of tyrosin and leucin in, 104, 105, 129.
 —, excretion of undetermined nitrogen in, 131.
 —, experimental, in dogs, taurin absent from bile in, 98.
 —, faeces in, 103, 121.
 —, family incidence of, 25, 26.
 —, frequency of, 17.
 —, heredity of, 25, 26.
 —, high ratio of neutral to total sulphur in urine in, 108, 110.
 —, history of our knowledge of, 88, 89.
 —, ill effects of, 15.
 — in children, 14, 26.
 — in dogs, 18.
 —, liability to cystitis in, 100.
 —, nitrogenous metabolism in, 131, 132.
 —, pathogeny of, 132.
 —, peculiarities of, as regards heredity, 27.

- Cystinuria, persistence of, 14.
 —, protein diet, effect of, in, 110.
 —, quantities of cystin excreted in, 107, 108.
 —, sex-incidence of, 18.
 —, sweat in, 103.
 —, temporary or intermittent, 14, 102.
 —, theories of, difficulties as to, 132, 133.
 —, treatment of, 116, 117, 118, 119, 120.
 —, urine, diamines in, 104, 121.
 —, —, leucin in, 129.
 —, —, lysin in, 128.
 —, —, properties of, 101, 103.
 —, —, tyrosin in, 129.
 —, varied types of, 104, 105, 131.
- Daltonism, 11.
- Deformities caused by hæmatoporphyria congenita, 141.
- Desamination of protein fractions in the organism, 80, 133.
 — — —, method of, 80.
- Developmental errors, classification of, 10.
- Dextrose, oxidation of alcohol grouping of, 8.
- Diabetes mellitus, ammonia excretion in, 74.
 — — as a disorder of metabolism, 4, 10.
 — —, connexion between primary pentosuria and, 176, 178.
 — —, impaired power of destroying homogentisic acid in, 75, 76.
 — —, in relation to pentosuria, 176.
- Di-alanyl-cystin, effect of administration of, to man, 99, 100.
- Diamines as metabolic products, 126, 129.
 —, detection of, in urine and fæces, 121-4.
 —, effect of administration of, to dogs, 125.
 — in cystinuric urines, intermittent appearance of, 124.
 — in fæces of cystinurics, 103, 121, 127.
- Diamines in normal urine, 9.
 — in urine of cystinurics, 104, 121.
 —, relationship of, to diamino-acids, 125.
See also Cadaverin and Putrescin.
- Diamino-acids, effect of administration to cystinurics of, 105.
 — in urine, 127.
See also Lysin and Ornithin.
- Diaminuria, an outcome of metabolic error, 129.
- Di-brom-tyrosin, effect of administration of, to alcaptonurics, 81.
- Diet, effect of, in alcaptonuria, 51, 55, 67.
 —, —, in cystinuria, 110-14.
 —, —, in pentosuria, 191.
 —, —, in steatorrhœa, 167-9.
 —, —, on diamine excretion, 128.
 —, —, on homogentisic acid excretion by alcaptonurics, 67, 68, 80.
 —, —, on porphyrinuria, 152.
 — in relation to butter-stools, 165, 167.
 —, milk, in pentosuria, 15, 175, 189, 190, 191.
- Di-leucyl-cystin, effect of administration of, to man, 99, 100.
- Dimethyl-phenelene-diamine as a precursor of melanin, 37, 38.
- 3·4 dioxo-phenylalanin, fate of, in animal organism, 86.
 — in relation to formation of melanin, 35, 36.
 — in the broad bean, 36.
- Dioxy-phenylalanin, *see* Dopa.
- Diseases of metabolism, 10.
- Dogs, capacity of, to destroy homogentisic acid, 76.
 —, cystinuria in, 18.
 —, kynurenic acid in urine of, 1.
- Dopa, rôle of, in melanin formation, 39, 40.
- Dopa-oxydase, absence of from albinotic eye, question of, 39.
 —, the enzyme concerned in formation of melanin, 36.
- Dopa-reaction, the, 36.
- Doubling of parts, 11.

- Ears, blueness of, in ochronosis, 60.
- Earthworms, porphyrin in skin of, as protection from light, 159.
- Enamel of teeth, pigmentation of, in hamatoporphyrin congenita, 144, 145.
- Enzyme concerned in pigment formation, 36.
- concerned in tissue staining, in ochronosis, 62.
- defect, the probable cause of inborn errors of metabolism, 16.
- Enzymes, desaminating, 133.
- in relation to pigmentation, 34, 35.
- , rôle of, in metabolism, 4, 5, 85, 133, 134, 154, 157.
- Eosin, power of, to cause hypersensitiveness to light, 157.
- Eosinophilia in hamatoporphyrin congenita, 147.
- Epithelial elements of skin in relation to pigmentation, 35.
- Ethyl sulphide in urine, 94.
- Excretory organs, effects of disease of, on excreta, 8.
- Exophthalmic goitre in relation to metabolism, 9, 10.
- Eyes, absence of pigment in albinos, 30, 38, 39.
- , destructive lesions of, in hamatoporphyrin congenita, 142.
- , tints of, as evidences of chemical diversity, 2.
- Fæces, in cases of steatorrhœa, 167, 168.
- of cystinurics, diamines in, 103, 121.
- , fat in, *see* Steatorrhœa.
- , porphyrin pigments in, 136, 137, 153.
- , stercoporpyrin in, in acute porphyrinuria with ascending paralysis, 150.
- Fat excretion in pancreatic disease, 165.
- , neutral, high proportion of, in fæces, suggestive of pancreatic lesion, 168.
- Fats and fatty substances in normal stools, 164.
- , specific differences in, 1.
- , splitting of, improved by pancreon, 169.
- , utilization of, in steatorrhœa, 168, 169.
- Fatty substances in butter-stools, nature of, 165.
- — in fæces of cases of steatorrhœa, 167, 168.
- Ferment in blood serum which destroys homogentisic acid, 56, 66.
- Fibrinogen, action of hamatoporphyrin on, in the light, 160, 161.
- Fibrous tissues, staining of, in ochronosis, 61.
- Fruit, alimentary pentosuria from use of, 174.
- Function, inborn derangements of, 12.
- Gait in ochronosis, 63.
- Galactose, effect of administration of, in pentosuria, 190.
- d-galactose, as a parent substance of racemic arabinose, 189, 190.
- , formation of, in animal body, 190.
- Gentisic acid, effect of administration of, to alcaptonurics, 84.
- , fate of, in normal organism, 73, 84.
- Glucosamine, effect of administration of, to pentosurics, 192.
- Glucose, breaking down of, 8.
- , effect of administration of, to pentosurics, 178.
- , relation of, to l-xylose, 189.
- Glycocol, action of liver or pancreas on, 133.
- , effect of administration of, to a cystinuric, 133.
- , rôle of, in excretion of aromatic sulphates, 65.
- , —, in protective mechanism, 3, 7.
- Glycosuria discriminated from pentosuria, 182.

- Glycosuria in association with pentosuria, 16, 27.
 —, renal, 192.
 Glycosuric acid of Marshall, 46.
 Glycuronates in urine, 7, 182, 183.
 —, test for, 182, 183.
 Glycuronic acid as intermediate metabolic product, 8.
 —, formula of, 182.
 —, in urine of dogs, 95.
 —, relation of, to l-xylose, 182.
 —, relationships of, to pentoses, 182.
 Glycyl-glycin, effect of administration of, to a cystinuric, 133.
 Glycyl-l-tyrosin, effect of injection of, in an alcaptonuric, 55.
 Gout as a disorder of metabolism, 4, 10.
- Hæmatoporphyria, acute, 138.
 —, chronic, 139.
 —, classification of, 138, 139.
 — congenita, 14, 136-63.
 —, amount of porphyrins excreted in, 151.
 —, blood picture in, 147.
 —, character and severity of symptoms of, possible explanation of, 159, 160.
 —, clinical features of, 139-47.
 —, consanguinity of parents and, 28, 148.
 —, enlargement of spleen in, 147.
 —, evil effects of, 15.
 —, expectation of life in, 141.
 —, fæces in, 145.
 —, family incidence of, 28.
 —, hirsuties in, 141.
 —, hydroa vacciniforme in, 140, 141.
 —, liability to tuberculosis in, 141.
 —, persistence of, 139.
 —, photo-sensitizing pigment in skin in, 160, 161.
 —, rarity of, 17, 147.
 —, relationship of, to hydroa vacciniforme, 157, 160, 161, 162.
- Hæmatoporphyrin as a catalyst, 160.
 —, effect of administration of, to dog, 155.
 —, effect of injection of, into white mice, 157, 158.
 —, effects of intravenous injection of, in normal man, 158.
 — in normal urine, 9.
 —, photo-sensitizing powers of, 157.
 — of Nencki, 148, 149, 150, 157.
 Hæmoglobin as a parent substance of porphyrin, 153, 154.
 — in urine, 3.
 Hæmoglobins, specific differences in, 1.
 Hæmoglobinuria, paroxysmal, porphyrinuria not excessive in, 154.
 Hæmolysis, porphyrin excretion in relation to, 154.
 Hair, colours of, as evidences of chemical diversity, 2.
 —, cystin obtained by hydrolysis of, 91.
 —, loss of, in white mice injected with hæmatoporphyrin, 158.
 —, red, in albinos, 32.
 — and nails, tyrosin in, in alcaptonurics, 56.
 Halogen benzenes, effect of administration of, to dogs, 95, 98.
 —, —, to man, 95.
 — proteins, effect of administration of, to alcaptonurics, 81.
 Hepatic disease, impaired power of destroying homogentisic acid in, 76.
 — disorders in relation to porphyrinuria, 155.
 Hippuric acid, product of protective mechanism, 3, 7.
 Hirsuties in exposed parts, in cases of hæmatoporphyria, 141.
 Holadin, effect of, in pancreatic steatorrhœa, 170.
 Homogentisic acid as an acetone-yielding substance, 66.
 — as an intermediate product of normal metabolism, 75, 76, 77.
 —, constitution of, 47.

- Homogentisic acid discovered in alcapton urines, 46.
- —, effect of administration of, to alcaptonurics, 75.
- —, —, to normal man, 74.
- —, estimation of, in urine, 48.
- —, excretion of, by alcaptonurics, 67.
- —, —, —, explanation of, 73.
- —, extraction of, from alcapton urine, 47, 48.
- —, fate of, in normal organism, 73, 74.
- —, ferment in normal sera destructive of, 66.
- —, formula of, 46, 54.
- —, how formed from tyrosin and phenylalanin, 82, 83.
- —, impairment of power to destroy, 78.
- — in alcaptonuric urine in relation to colour changes, 58.
- — in blood, in alcaptonuria, 56.
- — in serum and a positive Wassermann, 56.
- —, in what form excreted in urine, 73, 74.
- —, increased output of, after administration of phenylalanin, 68.
- —, increased output of, on protein diet, 51, 67.
- —, increased output of, after administration of tyrosin, 51, 68.
- —, lead salt of, 47, 77.
- —, limited destruction of, in normal organism, 74.
- —, maximum excretion of, after protein meal, 80.
- —, methods of extraction of, from alcapton urines, 47, 48.
- — output, effect of fasting on, 71, 72.
- —, —, restrained by potassium iodide, 57.
- —, output of, varies with mode of administration of phenylalanin and tyrosin, 52, 53.
- —, parent substances of, 51, 52, 54, 85.
- —, properties of, 48, 49.
- Homogentisic acid, reaction of, with ferric chloride, 44.
- —, synthetic preparation of, 47.
- — to nitrogen ratio, 67.
- — effect of diet on, 68, 70, 71, 72, 80.
- — raised in fever, 70.
- — table showing uniformity of in alcaptonurics, 69.
- —, variability of output of, 57, 58.
- — path of protein catabolism, 86.
- Human characteristics, Mendel's law in relation to, 23.
- Hydroa vacciniforme, appearance and results of, 141, 142.
- —, cause of, 161.
- —, distribution of eruption, 141.
- —, hæmatoporphyria not the only cause of, 143.
- — in association with hæmatoporphyria, 14, 140.
- — not always present in hæmatoporphyria congenita, 161, 162.
- —, relationship of hæmatoporphyria to, 157, 160, 161, 162.
- —, tendency to recurrence of, in summer, 141.
- —, ultra-violet rays most potent in producing, 161.
- Hydrogen sulphide in cystinuric urine, 103.
- Hydroquinone-acetic acid, *see* Homogentisic acid.
- Hydroquinone- α -lactic acid, the supposed uroleucic acid, 48, 50.
- —, synthesis of, 50.
- Hydroquinone-pyruvic acid, effect of administration of, to alcaptonurics, 83.
- Inborn and congenital errors defined, 11.
- — characters of, 10.
- — congenital occurrence of, 13.
- — conspicuous character of those known, 12.
- — heredity of, 18.
- — persistence of, 13.

- Individual differences, chemical, 2, 3.
- Indol, origin of, from tryptophane, 8.
- Indoxyl, excretion of, in urine, 8.
- Intermediate product theory of homogentisic acid, 73-7.
- products of metabolism, excretion of, 5, 9.
- Iso-cystin of Neuberg and Meyer, 90, 91.
- Jews, frequency of pentosuria among, 27, 28, 174, 175, 178.
- Joints, lesions of, in association with ochronosis and alcaptonuria, 63.
- Ketoses, 172.
- Kidneys, disease of, effect of on urinary excretion, 8.
- , selective retention of proteins by, 3, 8.
- , staining of, in ochronosis, 61.
- 'Kot-porphyrin' of Hans Fischer, 148.
- Kynurenic acid, in urine of dogs, 1.
- Kyphosis in ochronosis, 63.
- Lactose, effect of administration of, in pentosuria, 191.
- Lævulose, not dealt with by organism like dextrose, 5.
- Lead-poisoning, porphyrin in urine in, 150.
- Leucin, action of liver or pancreas on, 133.
- as an acetone-yielding substance, 66.
- in cystinuric urine, 104, 105, 129.
- in urine, 192.
- —, in acute yellow atrophy of liver, 10, 105.
- Light disease, 158.
- , effect of, in hæmatoporphyrin congenita, 15.
- , exposure of skin to, as determining attacks of hydroa, 140, 141.
- , hypersensitiveness to, the cause of hydroa, 161.
- Light, hypersensitiveness to, experimentally produced in man, 158.
- , —, produced by hæmatoporphyrin, 157.
- , influence of, on physiological processes in albinos, 41.
- Lipase, rôle of, in assimilation of fats, 165.
- Lipochromes present in albinos, 30.
- Liver, action of, on porphyrin, 156.
- , acute yellow atrophy of, excretion of tyrosin and leucin in, 10, 105.
- , damage to by phosphorus, effect of, in relation to hæmatoporphyrin excretion, 155.
- , desamination in, 133.
- , destructive action of, on hæmatoporphyrin, 155, 156.
- , disease of, effects of on metabolism, 9.
- , formation of acetone in perfused, 65, 66.
- in relation to butter-stools, 164, 165.
- , morbid process of porphyrinuria probably situated in, 155.
- , probable site of synthesis of mercapturic acid, 96.
- , production of bilirubin from porphyrin by, 156.
- substance of guinea-pigs, effect of, on uroporphyrin, 156.
- Lysin, the parent substance of cadaverin, 104, 105.
- , effect of administration of, to cystinurics, 126.
- , formula of, 125.
- in cystinuric urine, 128.
- Malformations, structural, classification of, 11.
- , —, compared to chemical anomalies, 11.
- , —, sex-incidence of, 18.
- Mecconium, porphyrin pigments in, 136, 137, 153.
- Melanin, effects of injection of, into albino rabbits, 33.
- , formation of, 34, 35.

- Melanin, formation of, a function of the cells where it occurs, 38.
 —, the probable precursor of, 36, 37.
 — pigments absent in albinism, 30.
 — —, experiments on the formation of, 34, 35.
 — —, origin of, 33.
 — —, rôle of, in man and animals, 30.
- Melanoblasts, 35.
- Mendel's law of heredity, 21, 22.
 — — —, in relation to alcaptonuria, 21.
 — — —, in relation to consanguinity, 22.
- Mercapturic acid, excretion of, in urine, 95, 96, 98.
 — —, synthesis of, 96.
 — — acids, 95.
- Mesoporphyrin of Nencki and Zalewski, 148.
- Metabolic processes, by-products of, 9.
 — 'sports', 10.
- Metabolism, by-products of, 9.
 —, derangements of, in disease, 9.
 —, diseases of, 10.
 — in compartments, 5.
 —, inborn errors of, 10, 12, 13.
 — family incidence of, 17.
 — frequency of, 17.
 — sex-incidence of, 17, 18.
 — unknown, 192, 193.
 —, individual differences in, 2, 3.
 —, influence of evolutionary factors upon, 3.
 —, intermediate products of, 7, 9, 95.
 —, nature of derangement of, in albinism, 33.
 — in alcaptonuria, 55, 56, 83.
 — in cystinuria, 104, 133.
 — in hæmatoporphyria congenita, 152, 153.
 — in pentosuria, 191, 192.
 — in steatorrhea, 170, 171.
 —, nitrogenous, of cystinurics, 131, 132.
 — of proteins, paths of, 5, 6.
 — of sulphur, disturbance of, in cystinuria, 100, 107.
 —, permanency of paths of, 6.
- Meta-methyl-tyrosin, effect of administration of, to alcaptonurics, 86.
- Meta-oxy-phenyl-pyruvic acid, effect of administration of, to alcaptonurics, 81.
- Meta-tyrosin, effect of administration of, to alcaptonurics, 81.
 —, effect of administration of, to normal man, 83.
- Methyl mercaptan in urine, 94.
- Methyl-pentoscs, 172.
- Mice, waltzing, 12.
- Milium in hæmatoporphyria, 142.
- Milk diet, effect of, on alcaptonurics, 70.
 — —, —, in pentosuria, 15, 175, 189, 190, 191.
 — —, —, in relation to porphyria, 152.
- Millon's reagent and alcaptonuric urine, 44.
 — — for detection of tyrosin in cystin calculi, 91, 130.
- Monobrombenzene, effect of administration of, to dog, 95.
- Mono-chlorbenzene, effect of administration of, to dog, 95.
- Muscle proteins, specific differences of, 2.
- Myeloma, multiple, excretion of Bence-Jones protein in, 7.
- Nails, loss of, in hæmatoporphyria congenita, 142.
 —, staining of, in ochronosis, 60.
- Neurasthenia, association of, with pentosuria, 176.
- Night-blindness, 11.
- Nitrogen, undetermined, in urine in cystinuria, 131.
- Nitrogenous metabolism of cystinurics, 131, 132.
 — waste, differences in form of excretion of, 1, 2.
- Norway hare, in winter coat, reacts to nucleo-proteins like albino, 41.
- Nose, blueness of, in ochronosis, 60.
- Nucleic acid, pentose in, 188.

- Nucleo-proteins, injection of, causing intravascular clotting, 41.
 —, pentose in, 188.
 —, pentose of, its derivation from d-glucose, 189.
 Nylander's reagent and alcaptonuric urine, 44.
- Obesity as a disorder of metabolism, 4, 10.
 Ochronosis, 58-64.
 —, aromatic compounds in blood in, 62.
 —, causes of, 59.
 —, clinical signs of, 59, 60, 61, 63, 64.
 —, experimental, 62.
 —, from chronic phenol poisoning, 59.
 —, gait and attitude in, 63.
 — in alcaptonuria, 15, 59.
 — in a cystinuric, 134.
 — in lower animals, 19.
 — of cattle, so called, 143.
 —, osteo-arthritis changes in relation to, 63.
 —, post mortem appearances in, 61.
 Orcin test for pentoses, 181, 183.
 — — —, Bial's modification of, 181, 182.
 — — —, Neumann's modification of, 183, 184.
 Ornithin, formula of, 125.
 —, putrescin derived from, 104, 125.
 Ortho-oxy-phenyl-pyruvic acid, effect of administration of, to alcaptonurics, 81.
 Ortho-tyrosin, effect of administration of, to alcaptonurics, 81.
 —, effect of administration of, to normal man, 83.
 Osazones from diabetic urines, 176, 177.
 Osseous lesions in alcaptonuria, 43.
 Osteitis deformans alcaptonurica, 64.
 Osteo-arthritis lesions in alcaptonuria, 15, 43, 63.
- Osteophytes in ochronotic skeleton, 64.
 β -oxybutyric acid, rôle of, in diabetes, 66.
- Pancreas, disease of, metabolic disorders due to, 12.
 —, —, steatorrhœa in, 14, 164.
 — in relation to steatorrhœa, 164, 165.
 —, pentose in, 173, 188.
 —, rôle of, in absorption and utilization of fats, 165, 166.
 Pancreatic disease, fat excretion in, 165.
 — —, signs of, in steatorrhœa, 168, 169.
 Pancreatic secretion, deficiency of indicated by 'butter-stools', 164, 171.
 — —, factors in, which regulate fat splitting and utilization, 170.
 Pancreon, effect of use of, in pancreatic steatorrhœa, 169, 170.
 Paramecium rendered hypersensitive to light by fluorescent pigments, 157.
 Para-methoxy-phenylalanin, effect of administration of, to alcaptonurics, 85.
 —, fate of, in normal organism, 75.
 Para-methyl-phenylalanin, effect of administration of, to alcaptonurics, 85.
 —, fate of, in normal organism, 75.
 Paroxy-phenyl-l-lactic acid, effect of administration of, to alcaptonurics, 80.
 Paroxy-phenyl-pyruvic acid, effect of administration of, to alcaptonurics, 81, 86.
 Penta-methylene-diamine, *see* Cadaverin.
 Pentosanes, in vegetable kingdom, 173.
 Pentosazones, properties of, 180.
 Pentose and nitrogen, excretion ratio of, in pentosuria, 191.
 —, excretion of, as ureide, 191.

- Pentose, first recognized in urine, 172, 173.
 —, form of excretion of, 184.
 — found in pancreas, 173, 188.
 — in tissues, amount of, 188.
 — in urine of depancreatized dog, 177.
 —, tests for, 179-84.
 —, limited power of normal organism to destroy, 173, 174.
 —, tissue, nature of the, 188.
 —, urinary, nature of the, 185-8.
 Pentoses, 172.
 —, Bial's test for, 181.
 —, distinction of the various, 183, 184.
 —, distinction of, from glycuronic acid, 182.
 —, fermentation test for, 184.
 — in urine of diabetics, 176, 177.
 —, optical forms of, 173.
 —, orcin test for, 181, 183.
 —, origin of urinary, 186.
 —, osazones of, 180.
 —, phloroglucin test for, 180.
 —, possible origin of, from galactose, 189, 190.
 —, properties of, 179.
 —, quantitative estimation of, in urine, 184.
 —, relationships of glycuronic acid to, 182.
 —, varieties of, 173.
 Pentosuria, 15, 172-93.
 —, alimentary, 174, 175.
 —, —, from eating fruits, 174.
 — among Jews, 27, 28, 174, 175, 178.
 —, arabinose, racemic, excreted in, 185.
 —, l-arabinose in urine in case of, 180.
 — as a sign of digestive disturbance, 176.
 —, association of neurasthenia with, 176.
 —, congenital occurrence of, question as to, 175.
 —, connexion between diabetes mellitus and, 176, 178.
 —, diagnosis of cases of, 178, 179.
 Pentosuria, discrimination between, and glycosuria, 182.
 —, effect of administration to pentosurics of:
 l-arabinose, 189.
 galactose, 190.
 glucose, 178.
 lactose, 190.
 thymus gland, 188.
 —, effect of diet in, 191.
 —, effect of protein diet on, 191.
 —, family incidence of, 27, 175.
 —, frequency of, 17, 174.
 —, glucose in blood in, 175.
 —, glycosuria in cases of, 177, 178.
 —, harmlessness of, 15, 16, 175.
 —, heredity of, 27, 28.
 —, history of our knowledge of, 172, 173.
 —, milk in relation to, 15, 175, 189, 190, 191.
 —, prognosis of, 175.
 —, quantity of pentose excreted in, 184.
 —, race-incidence of, 174, 175.
 —, sex-incidence of, 18, 175.
 —, temporary, 189.
 —, two kinds of, 187.
 —, urine in, 179, 180.
 —, —, not fermented by yeast, 179.
 —, —, optical properties of, 183, 185.
 Pernicious anæmia, porphyrinuria not excessive in, 154.
 Phalanges, atrophy of, in hæmatoporphyrin congenita, 142.
 Phenylacetic acid, effect of its administration to alcaptonurics, 79.
 —, —, yields no acetone in perfused liver, 66.
 Phenyl- α -lactic acid as an acetone-yielding substance, 66, 80.
 — as first step in breaking down of phenylalanin, 80.
 —, —, fate of, in alcaptonurics, 76, 79.
 —, —, in dogs, 76, 77.
 Phenylalanin, a parent substance of homogentisic acid, 51, 52.

- Phenylalanin as an acetone-yielding substance, 66.
 —, desamination of, 133.
 —, effect of administration of, to alcaptonurics, 52.
 —, effect of administration of, to normal man, 77.
 —, fate of, in normal organism, 65.
 —, formula of, 54.
 — in serum and a positive Wassermann, 56.
 Phenyl-glyceric acid, not converted into homogentisic acid, 79.
 Phenyl-hydrazine test for pentoses, 180.
 Phenyl- α -lactic acid, effect of its administration to alcaptonurics, 79.
 — —, yields acetone when per-fused through liver, 66.
 Phenyl- β -lactic acid, effect of its administration to alcaptonurics, 79.
 — —, yields no acetone in per-fused liver, 66.
 Phenyl-propionic acid, effect of its administration to alcaptonurics, 79.
 Phenyl-pyruvic acid, effect of its administration to alcaptonurics, 79.
 Phloroglucin test for pentoses, 180, 181.
 Photo-sensitizing action of por-phyryns, 160.
 Phylloporphyrin, 136.
 Piebald individuals, 32.
 Piebaldism in lower animals, 33.
 — — —, probable cause of, 38.
 Pigment, cutaneous, as a protec-tion from light, 42.
 — formation, controversy as to structures where it is formed, 40.
 — — in different situations, 39.
 — — in malignant growths, 31, 39.
 — in ochronosis, suggested sources of, 62.
 — in tissues, photo-sensitizing, in hæmatoporphyrin congenita, 15.
 —, ocular, cause of lack of in albinos, 38, 39.
 Pigment of porphyrin group in normal urine, 9.
 —, red, in hair of some albinos, chemistry of, 32.
 Pigmentation in organisms as affecting their resistance, 41, 42.
 — of bone in man and lower animals, 143, 145.
 — —, means of detecting, 143, 144.
 — of skin, abnormal, in hæmato-porphyrin congenita, 141.
 — —, produced in man by injec-tion of hæmatoporphyrin, 158.
 — of teeth in hæmatoporphyrin, 144, 145.
 — — in lower animals, 145.
 —, physiological causes of, 31.
 —, surface, in alcaptonurics, 59, 60.
 —, —, theoric as to, 35-8.
 Pigments in alcaptonuric urine, 58.
 — of porphyrin group, 136, 137.
 —, power of fluorescent, to pro-duce hypersensitiveness to light, 157.
 Polypeptides, effect of administra-tion of, to a cystinuric, 133.
 —, effect of administration of, to normal man, 99, 100.
 Polyphenol-oxydase in relation to pigment formation, 35.
 Porphyrin, an endogenous product of normal metabolism, 153.
 —, as an intermediate substance in hæmoglobin anabolism, 153.
 — bands in spectrum, 146.
 —, deposit of, in bone, 143.
 — excretion in relation to hæmo-lysis, 154.
 —, exogenous formation of, ques-tion as to, 152.
 — group of compounds, 136.
 — in blood-serum of porphyrin-urics, 145.
 — in fæces after hæmorrhage into alimentary canal, 152.
 —, photo-sensitizing and inactive forms of, 159.
 — pigment, in normal urine, 9.
 —, source and origin of metabolic, 157.
See also Hæmatoporphyrin.

- Porphyrinogen, 152, 162.
 —, demonstration of, in hydroa, 162.
 —, in fæces, 162.
 —, in urine, 162.
 Porphyrins as products of metabolism, 136.
 —, characters and properties of the, 148, 149.
 —, derivation of, 151.
 —, formulæ of the, 149.
 —, metabolic, isolation of, 148.
 —, parent substance of, 151, 153.
 —, place of, in animal metabolism, 152.
 —, site of formation and source of, 152.
 —, spectra of, 136, 149, 150, 151, 152.
 —, varying photo-sensitizing powers of, 159.
 Porphyrinuria, 137.
 —, clinical types of, 138, 139.
 —, congenital occurrence of, question of, 139, 140.
 — due to sulphonal, 18.
 —, hepatic disorders in relation to, 155.
 — in lower animals, 19.
 —, intermittency of, 162.
 —, relation of degree of, to severity of hydroa, 162.
 —, sex-incidence of, 18.
 —, symptoms associated with, 138.
 —, toxic, 14, 150.
 —, —, sex-incidence of, 18.
 — with ascending paralysis, 138, 150.
 — — —, uroporphyrin in urine of case of, 150: *and see* Hæmatoporphyrin.
 'Porphyrism' of Günther, 139.
 Potassium iodide, power of to restrict homogentisic output, 57.
 Precipitin test for proteins, 2.
 Protective mechanisms against chemical poisons, 3.
 Protein diet, rich, effect of on homogentisic acid output in alcaptonuria, 51, 67, 80.
 Protein fractions, desamination of, in organism, 80, 133, 134.
 — —, differences in manner of dealing with, 5.
 — —, normal metabolism of, 65, 66.
 — —, path of metabolism of, 72, 73.
 — —, —, in hunger metabolism, 72.
 — —, respective fates of, question as to, 131.
 — —, seat of their destruction, 65.
 —-free diet in the treatment of cystinuria, 119.
 — in diet in relation to cystin excretion in cystinurics, 110-14.
 — intake, reduced, in treatment of cystinuria, 119.
 — poisoning simulated by symptoms produced by porphyrin injections, 160.
 Proteins, changes undergone by, in alimentary canal, 132.
 —, cystin obtained by hydrolysis of, 91.
 —, effect of administration of:
 to alcaptonurics, 51, 52, 53, 67.
 to cystinurics, 107, 123.
 to pentosurics, 191.
 —, excretion of, by kidneys, 3.
 — in diet as affecting sulphate excretion in urine, 94.
 — in diet, effect of, on diamine excretion, 128.
 — in diet in relation to dl-arabinose output, 191, 192.
 — in diet, in relation to cystin to nitrogen ratio in cystinurics, 114.
 —, paths of metabolism of, 5, 6.
 —, specific differences among, 2.
 Protocatechuic acid, fate of, in normal organism, 84.
 — —, thought to be present in alcapton urines, 46.
 Putrescin, derivation of, from ornithin, 104, 125.
 —, formula of, 124.
 —, in cystinuric urine, 104, 105, 121, 123.

- Putrescin, in faeces, 121, 123, 124.
 —, —, in cholera nostras, 122.
 —, relation of, to arginin, 125.
 Pyrocatechin, derivative of, the probable precursor of melanin, 36.
 —, thought to be present in alcapton urines, 46.
- Quinone grouping, a probable step in change from tyrosin to homogentisic acid, 82.
- Renal glycosuria, 192.
 Rhamnose, 172.
 — in diabetic urine, 177.
 d-ribose, in nucleic acid, 188.
- Sclerotics, staining of, in ochronosis, 60.
 'Sibships' in relation to inborn errors of metabolism, 19, 20.
 Skin eruptions described in association with red urine, 140.
 —, experimental formation of pigment in the, 34, 35.
 —, pigmentation of, in hæmatoporphyria congenita, 141, 142.
 —, —, in ochronosis, 60, 61.
 —, tints of, as evidences of chemical diversity, 2.
 Sodium bicarbonate, in the treatment of cystinuria, 119.
 — cholate, effect of administration to dogs of, on taurocholic acid, 97.
 Spectra of porphyrins, 136, 149, 150, 151, 152.
 Spectroscope, use of, in detection of hæmatoporphyrin, 137, 138, 146.
 Spectroscopic tests for pentose, 181.
 Spleen, enlargement of, in hæmatoporphyria congenita, 147.
 — pulp, powerless to destroy uroporphyrin, 156.
 Steatorrhœa, acquired, 14.
 —, congenital, 14, 164-71.
 —, —, clinical history of cases of, 166, 167.
 —, —, consanguinity of parents and, 28, 166.
- Steatorrhœa, congenital, considered as a Mendelian regressive character, 29.
 —, —, effect of diet in cases of, 167-9.
 —, —, effects of, 15.
 —, —, faeces in, 167, 168.
 —, —, family incidence of, 28, 166.
 —, —, history of our knowledge of, 164.
 —, —, rarity of, 17, 166.
 —, —, relation of to pancreatic disease, 170.
 —, —, sex-incidence of, 18.
 —, —, utilization of fats in, 168, 169.
 —, —, waste of fat in, less than in pancreatic disease, 171.
 — without pancreatic disease, case of, 170.
- Stercoporphyrin, 159.
 — and uroporphyrin contrasted, 159.
 —, formula of, 149.
 — in faeces in hæmatoporphyria congenita, 145, 148, 149.
 — in urine in lead-poisoning, 151.
 —, spectra of, 149, 150.
- Sulphates, aromatic, a product of protective mechanism, 3, 93.
 —, —, in urine, 3, 65, 93.
 —, ethereal, in urine, 7, 93.
 —, excretion of, in cystinuria, 107, 108, 110, 111.
 —, urinary, cystin excreted at expense of, in cystinuria, 108.
 —, —, ratio of neutral sulphur to, 7, 93, 108.
- Sulphocyanides in saliva and gastric contents, 92.
 — in urine, 93, 94.
- Sulphonal as a cause of porphyrinuria, 138, 139.
 — porphyrinuria, 159.
 — — in rabbits, 156.
 — —, uroporphyrin in urine in, 150.
- Sulphur excretion after administration of cystin, 115, 117.
 — — after taurin administration, 99.

- Sulphur in cystin, 88, 89.
 — metabolism, 92.
 — — in cystinuria, 100, 107.
 — —, normal paths of, 92.
 — — unaffected in steatorrhœa, 167.
 —, neutral, of urine, 93.
 —, —, —, constituents of, 9, 94.
 —, —, —, effect of administration of taurin on, 98.
 —, —, —, estimation of cystin in urine, by increase of, 106.
 —, —, —, increase of, in cystinuria, 108.
 —, —, —, not increased by administration of cystin, 99, 115.
 —, —, —, not increased by protein diet, 94, 106.
 —, —, —, product of tissue metabolism, 94.
 —, —, —, ratio of, to sulphates, in cystinuria, 108.
 —, —, —, ratio of, to sulphates, normal, 93.
 Sulphuric acid, rôle of, in protective mechanism, 3.
 Sweat of alcaptonurics, 61.
 — of cystinurics, 103.

 Taurin as source of neutral sulphur excretion, 94.
 —, effect of administration of, to man and animals, 98, 99.
 —, excretion of, in man and animals, 98, 99.
 —, relation of, to cystin, 96, 98, 100.
 Taurin-carbamic acid in urine, 99.
 Taurocholic acid, formation of, 96
 Teeth, pigmentation of enamel of, in hæmatoporphyria, 144.
 —, —, in lower animals, 145.
 Tetra-methyleno-diamine, *see* Putrescin.
 Thiosulphates in urine, 94, 99, 116.
 Thyroid gland, effect of, on metabolism, 5, 10, 12.
 Tissue pentose, total quantity of in body, 188.
 Trional as a cause of hæmatoporphyria, 138.

 Trional porphyrinuria, uroporphyrin in urine of, 150.
 Tryptophane, a primary protein fraction, 5.
 —, constitution of, 53.
 —, effect of administration of, to alcaptonurics, 53, 54.
 — kynurenic acid derived from, 1.
 —, not broken up to yield homogentisic acid, 54.
 Tuberculosis, liability to, in hæmatoporphyria congenita, 141, 142.
 Turacoporphyrin, 136.
 Tyrosin, a parent substance of homogentisic acid, 51, 52, 82, 83.
 —, a primary protein fraction, 5.
 —, administration of, in case of cystinuria and alcaptonuria, 52.
 — as an acetone-yielding substance, 66.
 — crystals in cystinuric urine, 129.
 —, desamination of, 135.
 —, effect of administration of: in hepatic disease, 76.
 to alcaptonurics, 51.
 to cystinurics, 105, 130.
 to diabetics, 76.
 to normal men, 77.
 —, fate of, in normal organism, 65.
 —, formula of, 54.
 —, halogen derivatives of, 81.
 —, in cystinuric urine, 104, 105.
 — in serum and a positive Wassermann, 56.
 — in urine, in acute yellow atrophy of liver, 10.
 —, relation of to dioxy-phenylalanin, 37.
 Tyrosinase, suggested formation of melanins by, 34, 35.
 —, suggested rôle of, in ochronosis, 62.
 Tyrosinases, adrenalin and, 37.

 Ultra-violet rays in relation to photo-sensitizing properties of hæmatoporphyrin, 161.
 Urea, excretion of, by mammals, 2.
 Uric acid, excretion of, by birds and reptiles, 1.
 — —, —, in alcaptonuria, 51.

- Uric acid in blood and tissues in gout, 10.
- Urine, accidental constituents of, 7.
- , acetone-bodies in, 66.
 - , albumoses in, 10.
 - , alcaptonuric darkening of, on exposure to air, 43, 58.
 - , —, homogentisic acid in, in relation to colour change, 58.
 - , —, pigments in, 58.
 - , arabinose in, 174, 180.
 - , aromatic sulphates in, 3, 7, 65, 93.
 - , Bence-Jones protein in, 3, 7.
 - , black, 44, 45, 58.
 - , cadaverin in, 9, 102, 121.
 - , chromogen of purple pigment in, 192.
 - , cystin in, estimation of, 106.
 - , cystinuric, diamines in, 104.
 - , —, properties of, 101, 103.
 - , diabetic, pentose in, 177.
 - , diamines in, 121.
 - , free pentose in, 184.
 - , glycuronates in, 7, 182, 183.
 - , —, test for, 182, 183.
 - , hæmatoporphyrin in, 137, 146, 153.
 - , homogentisic acid in, 47.
 - , in hæmatoporphyrin, 145, 146.
 - , in pentosuria, characters of, 179.
 - , intermediate metabolic products in, 9.
 - , kynurenic acid in, 1.
 - , leucin in, 10, 192.
 - , melanin in, 33.
 - , pentose in, 174.
 - , —, as urcide, 184.
 - , pentosuric, forms of pentose found in, 185-8.
 - , —, racemic arabinose in, 185, 187.
 - , pigment of porphyrin group in, 9, 140.
 - , pigments of, in albinos, 30.
 - , porphyrin pigments in, 136.
 - , —, methods of detection of, 146.
 - , putrescin in, 121.
 - , red, in porphyrinuria, 138, 139, 140.
- Urine, sources of unusual constituents in, 7.
- , sugar of d-xylose group in, 186, 187.
 - , sulphates in, 7, 93, 94, 97, 98, 99.
 - , sulphur-containing acids in, 9.
 - , taurin-carbamic acid in, 99.
 - , tyrosin in, 10.
 - , 'Urin-porphyrin' of Hans Fischer, 148.
 - Urobilin in urine, source of, 8.
 - Uroferriic acid in urine, 94.
 - 'Urofuscin' of Günther, 151.
 - , —, nature of, 152.
 - Uro-fusco-hæmatin, 151.
 - Uroleucic acid, history of, 49-51.
 - , —, non-existence of, 49-51.
 - , —, of Kirk, 46, 48, 49.
 - , —, an impure homogentisic acid, 49.
 - Uroporphyrin, 148, 149, 150, 159.
 - and stercoporphyrin contrasted, 159.
 - , effect of administration of, to normal man, 151.
 - , effect of administration of, to rabbit, 151.
 - , formula of, 149.
 - Uroproteic acid, in urine, 94.
 - Uro-rubro-hæmatin, 151.
- Vertebral column in ochronosis, 63, 64.
- Vitiligo, distinction between, and albinism, 33.
- , experimental staining not successful in, 36.
- Wassermann test, in cases of alcaptonuria, 56, 57.
- Wax, aural, in alcaptonurics, 61.
- Xanthin calculi, 192, 193.
- Xylosazone, characters of a, 186.
- l-xylose, derivation of from d-glucose, 189.
- , dextro-rotatory properties of, 173.
 - , in pancreatic tissue, 188.
 - , in vegetable kingdom, 172.
 - , relation of, to glucose, 189.
- Xyloses, formulæ of, 173.
