

# CONTENTS

## INTRODUCTION

	PAGE
A. — HISTORICAL PART . . . . .	I
B. — DESCRIPTIVE PART . . . . .	20

## PART I.—THE MATERIAL BASIS OF HEREDITY

### CHAPTER I

#### THE GERM-PLASM —

1. The fundamental units . . . . .	37
2. The control of the cell . . . . .	45
3. The determinants . . . . .	53
4. The id in ontogeny . . . . .	60
5. Summary of sections 1-4, relating to the structure of the germ-plasm . . . . .	75
6. The mechanism for the phyletic changes in the germ-plasm . . . . .	77
7. The magnitude of the constituents of the germ-plasm . . . . .	85

## PART II.—HEREDITY IN ITS RELATION TO MONOGONIC REPRODUCTION

### CHAPTER II

#### REGENERATION —

1. Its cause and origin in the idoplasm . . . . .	93
2. The phylogeny of regeneration . . . . .	114
3. Facultative or polygenetic regeneration . . . . .	126
4. Regeneration in plants . . . . .	132
5. Regeneration in animal embryos, and the principles of ontogeny . . . . .	134

## CHAPTER III

	PAGE
MULTIPLICATION BY FISSION —	
1. Preliminary remarks . . . . .	145
2. The process of fission in the <i>Naiada</i> . . . . .	146
3. The process of fission in the <i>Microstomide</i> . . . . .	149
4. The phylogeny of the process of multiplication by fission . . . . .	151

## CHAPTER IV

MULTIPLICATION BY GEMMATION —	
1. The process of gemmation in animals . . . . .	154
<i>a.</i> Cœlenterata . . . . .	154
<i>b.</i> Polyzoa . . . . .	158
<i>c.</i> Funicata . . . . .	160
2. The process of gemmation in plants . . . . .	163
3. Comparison of the process of gemmation in animals and plants . . . . .	166
4. The phylogeny of the process of multiplication by gemmation . . . . .	168

## CHAPTER V

ALTERNATION OF GENERATIONS IN ITS RELATION TO THE IDIOPLASM . . . . .	173
---	-----

## CHAPTER VI

THE FORMATION OF GERM-CELLS —	
1. The continuity of the germ-plasm . . . . .	183
2. The germ-tracks . . . . .	192
3. Historical account of the theory of the continuity of the germ-plasm . . . . .	198
4. Objections to the theory of the germ-plasm . . . . .	202
5. Galls . . . . .	218

## CHAPTER VII

SUMMARY OF PART II. (CHAPTERS II.—VI.) . . . . .	225
--	-----

## PART III.—THE PHENOMENA OF HEREDITY RESULTING FROM SEXUAL REPRODUCTION

INTRODUCTORY REMARKS ON THE NATURE OF SEXUAL REPRODUCTION . . . . .	230
---	-----

## CHAPTER VIII

	PAGE
MODIFICATIONS OF THE GERM-PLASM CAUSED BY AMPHIMIXIS —	
1. The necessity of a halving of the germ-plasm . . . . .	235
2. Proof that the essential part in the process of 'reducing division' consists in the extrusion of ids . . . . .	240

## CHAPTER IX

ONTOGENY RESULTING FROM THE UNION OF THE GERM-PLASM OF TWO PARENTS —	
1. The nature of the offspring as determined by the process of fertilisation . . . . .	253
2. The share taken by the ancestors in composition of the germ-plasm . . . . .	256
3. The struggle of the ids in ontogeny . . . . .	260
<i>a.</i> Plant-hybrids . . . . .	260
<i>b.</i> Intercalary remarks on variation . . . . .	271
<i>c.</i> The struggle of individual characters . . . . .	274
4. The force of heredity . . . . .	290
5. Summary of Chapter IX. . . . .	293

## CHAPTER X

THE PHENOMENA OF REVERSION IN THEIR RELATION TO AMPHIMIXIS —	
1. Reversion to racial characters in plant-hybrids . . . . .	299
2. Reversion to individual characters in man . . . . .	308
3. Reversion to the characters of ancestors far removed in animals and plants . . . . .	316
4. Reversion to rudimentary characters . . . . .	333
5. Preliminary summary of sections 1-5 . . . . .	335
6. Reversion in asexual reproduction . . . . .	338
<i>a.</i> Reversion in the process of gemmation . . . . .	338
<i>b.</i> Reversion in parthenogenesis . . . . .	344
7. Proof that the determinants become disintegrated into biophors . . . . .	348

## CHAPTER XI

DIMORPHISM AND POLYMORPHISM —	
1. Normal dimorphism . . . . .	352
2. Pathological dimorphism: hæmophilia . . . . .	370
3. Polymorphism . . . . .	374
4. Dichogeny in plants . . . . .	380

## CHAPTER XII

	PAGE
DOUBTFUL PHENOMENA OF HEREDITY —	
1. 'Xenia' and telegony . . . . .	383
2. The influence of temporary abnormal conditions of the parents on the offspring . . . . .	386
3. The transmission of diseases . . . . .	387

## PART IV.—THE TRANSFORMATION OF SPECIES: ITS ORIGIN IN THE IDIOPLASM

## CHAPTER XIII

## THE SUPPOSED TRANSMISSION OF ACQUIRED CHARACTERS —

1. Difficulties in the way of a theoretical basis for this assumption . . . . .	392
2. The hypothesis tested by facts . . . . .	396
3. Climatic variation in butterflies . . . . .	399

## CHAPTER XIV

## VARIATION —

1. Normal individual variation . . . . .	410
2. Pathological variation . . . . .	428
3. Summary of the above two sections and conclusions . . . . .	431
4. Variations on a larger scale . . . . .	435
<i>a.</i> The origin of these variations . . . . .	435
<i>b.</i> The transmission of these variations . . . . .	444

SUMMARY AND CONCLUSION. . . . .	450
---------------------------------	-----

## LIST OF FIGURES

- Fig. 1. Diagram of nuclear division.
2. Two idants of *Ascaris megalcephala*.
  3. Diagram of the cell-generations in the fore-limb of a newt.
  4. Multiplication by fission in a marine worm (*Myrianida*).
  5. Transverse section through the 'zone of gemmation' in a fresh-water worm (*Nais*).
  6. An early stage in the formation of a bud in a Hydroid polype (*Eudendrium*).
  7. Apex of a shoot of a fresh-water Alga (*Chara*).
  8. Female water-flea (*Daphnia*), with summer eggs.
  9. Nauplius larva of *Leptodora hyalina*.
  10. Alternation of generations in *Bougainvillea*.
  11. Strobilation of a Medusa.
  12. Degeneration of a Medusa into a mere gonophore.
  13. Early stages of development of the primitive germ-cells in *Sagitta*.
  14. Early stages in the development of the primitive germ-cells in *Moina*.
  15. Early stage of the embryo of *Rhabditis nigrovenosa*.
  16. Diagram of the germ-track in *Rhabditis nigrovenosa*.
  17. *Volvox* and *Pandornia*.
  18. Process of fertilisation in *Ascaris megalcephala*.
  19. Diagram to illustrate the composition of the idants out of individually different ids.
  20. Formation of spermatozoa in *Ascaris megalcephala*.
  21. Formation of ova in *Ascaris megalcephala*.
  22. Diagram to illustrate the combination of idants in hybrids.
  23. The two varieties of *Cypris reptans*.
  24. *Bonellia viridis*, male and female.
